Prove - Flexbox

Recipe Book Part 1

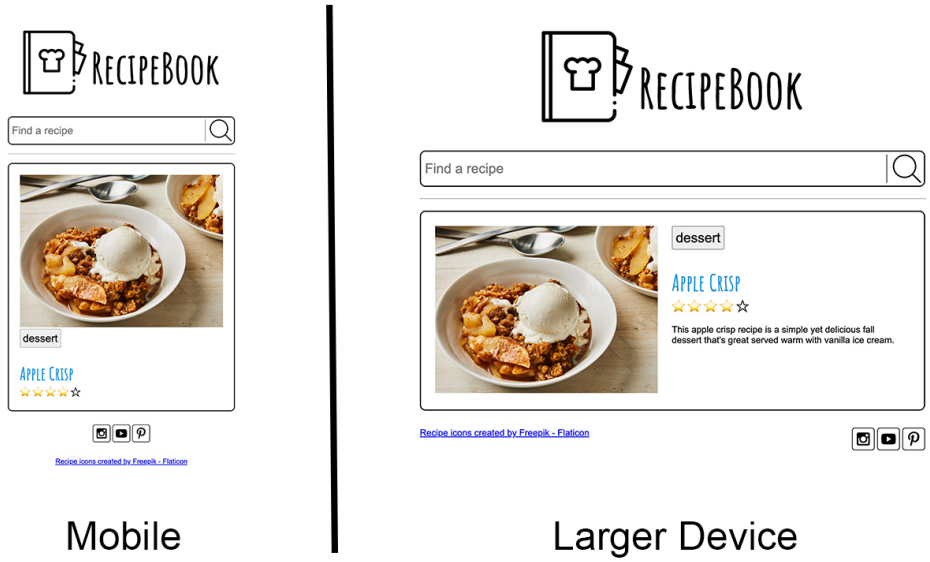
File Management:

Create a folder called 'recipes'. Make sure you have an index.html page and a separate CSS file.

Instructions:

Use flexbox to layout the logo and title, the search area, the recipe, and the footer.

This demonstrates how it will look.



Notice how the recipe description does not show up on mobile devices.

The apple crisp image, logo, search icon, and social media icons are included in these images. Download the recipe images and add them to your project folder. You will use the rest of the recipe images in the next prove activity.

Also provide the new og meta tags so this site will show up on social media properly.

Remember social preview images are 1200x630px and apple touch icons are 180x180px.

Copy Code

```
<!-- Open Graph (Facebook, LinkedIn, etc.) -->
<meta property="og:type" content="website">
<meta property="og:title" content="Your Title">
<meta property="og:description" content="Your Description">
```

```
<meta property="og:url" content="Your URL">
<meta property="og:image" content="social-preview-image.png">

<!-- X Card -->
<meta name="twitter:card" content="Social Preview Image">
<meta name="twitter:title" content="Your Title">
<meta name="twitter:description" content="Your Description">
<meta name="twitter:image" content="social-preview-image.png">

<!-- One favicon (ICO works everywhere) -->
<link rel="icon" href="/favicon.ico">

<!-- One Apple Touch Icon (iOS home screen) -->
<link rel="apple-touch-icon" href="images/apple-touch-icon.png">
```

We are using some icons from a site called Flaticon. We are free to use them, but the license require some attribution in return. This site asks that we add this link. We will put it in the footer.

Copy Code

```
<a href="https://www.flaticon.com/free-icons/recipe" title="recipe icons">Recipe icons created by Freepik - Flaticon</a>
```

Along with the attribution for the recipe book icon, we also need some social media icons. These icons also require attribution. These icons are provided from Iconfinder through an account called AlfredoCreates. The license here is bit more flexible in how we attribute. This time we will do it in a comment.

Copy Code

```
<div class="social">
  <!-- Social media icons provided under CC from https://www.iconfinder.com/AlfredoCreates  -->
  <a href="#"><img src="images/instagram_icon.svg" alt="instagram icon"></a>
  <a href="#"><img src="images/youtube_icon.svg" alt="youtube icon"></a>
  <a href="#"><img src="images/pinterest_icon.svg" alt="pinterest icon"></a>
</div>
```

For the ratings section we want to show filled in and empty stars. We need to make sure that this very visual rating representation is also accessible. We can use aria attributes to do this.

Copy Code

```
<span
  class="rating"
  role="img"
  aria-label="Rating: 4 out of 5 stars"
>
  <span aria-hidden="true" class="icon-star">⭐</span>
  <span aria-hidden="true" class="icon-star">⭐</span>
  <span aria-hidden="true" class="icon-star">⭐</span>
  <span aria-hidden="true" class="icon-star">⭐</span>
  <span aria-hidden="true" class="icon-star-empty">☆</span>
</span>
```

The font used for the headlines is called Amatic SC and can be found on Google fonts.

Submit your project

Commit your changes, then push them to GitHub. Wait a few minutes then check to make sure they show on Github pages.

After verifying that your page updated, submit the URL to your page in Ilearn. The URL will look something like this:

```
https://githubusername.github.io/wdd131/recipes
```

Make sure to replace "githubusername" with your actual github username.
